[Additional Sediment Sampling Location Recommendations Revised docx.pdf](#)

Hi Rob,

As we have discussed, EPA has revised the list of recommended locations to be sampled as part of the next Supplemental Sediment Sampling Program (SSP2). The attached list includes the revised recommendations. Please note the following:

1. All location are above RM 8.3
2. All locations should be sampled to full depth/refusal
3. The revised recommendations now include those received by NJDEP, NOAA, FWS and the USACE.

Once you have had a chance to review this, we would like to set up a meeting, with our Partner Agencies, to go over the locations and discuss any concerns/responses you may have.

Please let me know if you have any questions.

Thanks,

Stephanie
